Many plants and plant-derived materials are of direct interest to forensic scientists, including drug analysts, toxicologists, clinical analysts and sport analysts.

For millennia, plants have been used as sources of medication, as materials with psychoactive effects or as poisons. More recently, the internet has facilitated individuals' ability both to research these materials and to identify commercial sources from which they can be obtained. A revived enthusiasm for natural medicines has resulted in an increase in self-medication using herbal products, some of which may contain other than the advertised material. Contrary to some expectations, plant-derived materials can be just as toxic as synthetic

ChromaDex is “setting THE standard”

At ChromaDex, our core competency is the isolation, development and characterization of phytochemical reference standards. These standards are used in laboratory settings all over the world to ensure the quality of raw materials and finished products.

chemicals if incorrectly administered. Indeed, some terrorist groups have investigated plant materials as suitable sources for toxins.

Meanwhile, a significant business sector has also developed to market and distribute ‘herbal highs’, plant materials which are claimed to be psychoactive, but not yet subject to legal controls. In addition, as drug control legislation has increasingly addressed the chemical precursors used to make controlled drugs, criminals have turned to plant materials as sources of alternative starting materials.

For all these reasons, we have brought together an interesting and extensive range of certified and traceable plant-derived substances for forensic, medical, sports and medicines testing laboratories to use as reference materials in their work.

This is a relatively new area of application for botanical reference materials, so we are extremely interested to hear from users and potential users. Please contact us and let us know about your experiences and priorities and about other substances which you would like to see added to the range.
